

SAMIS Build 13.19

Overview

The SAMIS Build Initiatives & Enhancements Communication Bulletin contains information about business and system changes that have occurred, and been released/deployed into SAMIS production.

Details of Enhancements

In SAMIS Build 13.19 the following expected benefits were deployed into SAMIS production:

- **SE-130 SAMIS Security Certificate**
This change was implemented to add “https” to SAMIS’ URL in order to bring SAMIS in line with other Government systems and policies regarding security.
 - **SE-132 Ability to Record the Location and Asset Services**
Under both fast and slow data entry, there is now the option to record the locations that an asset services. For example, an A/C in Room 001 may also service rooms 002-004, which can now be recorded, via ticking the appropriate box (es).
 - **SE-117 Asbestos Register Fields to Red Text**
The Action Taken and Date fields now display in the Asbestos Reports as red text.
 - **SE-93 Floor Covering Issue**
Issues encountered when trying to change floor covering finish due to old records not being removed prior to new records attempted to be saved to database. This issue has been fixed.
 - **SE-131 Additional Fields in the Equipment Register Export to Excel**
Additional fields were added to the Equipment Register Export to Excel functionality.
 - **SE-139 Google Maps button on Site Asset Details**
There is now a link on a sites’ asset details screen which (provided data has been entered) will open a new tab in their browser, showing the site on Google Maps.
-

Deployment Date

27th June 2017
