

SAFETY ALERT

Potential Fall from Height

Assess the risks for fall from height potential when needing to load, unload or access a traytop or trailer.

Example of no edge protection

Portable edge protection

DELIVERY VEHICLES AND MOBILE PLANT EDGE PROTECTION

Common activities which present a fall from height risk for delivery vehicles and mobile plant operators. Delivery drivers, plant operators or workers may need to access elevated areas of their vehicles or plant for activities including:

- Loading or unloading
- Pre-start Inspections
- Maintenance and repairs.

To prevent falling risks associated with these activities:

Eliminate the fall from height risk by undertaking loading and unloading work from the ground, by:

- Having loads delivered to site in a manner that allows the crane crew or forklift operators to unload safely without climbing onto vehicles or loads.

Reduce the remaining risks by having:

- Edge protection fitted to delivery vehicle/plant prior to loading and unloading activity or climbing on the item of plant
- Portable edge protection or suitable platform available to be positioned against delivery vehicle to permit safe loading and unloading
- Access point must provide 3 points of contact at all times.
